

Employee Offboarding

Owner: Mark Stolte, Founder — markstolte02@gmail.com

Last reviewed: 2026-07-05

Stage: Pre-launch / active development

Current status: not yet applicable

Penny Pilot has no employees or contractors as of this review — Mark Stolte is the only person with access to any system listed in the

[Access Control Policy](#). This policy is written now, before it's needed, so that the checklist exists and is not improvised the first time someone leaves.

When this applies

This policy takes effect the moment anyone other than the founder is granted access to any of: the GitHub repository, the Supabase project, the Plaid dashboard, Apple Developer Program / App Store Connect, Google Cloud Console / Play Console, the Expo/EAS account, or any password-manager vault holding Penny Pilot credentials.

Offboarding checklist (to execute on a departing person's last day, or immediately upon

involuntary termination)

- [] **GitHub:** remove from the organization/repository; revoke any personal access tokens or SSH keys they registered.
- [] **Supabase:** remove as a project member; if they ever had access to the service-role key or Edge Function secrets, rotate those secrets (service-role key, `PLAID_TOKEN_ENCRYPTION_KEY`, `PLAID_CLIENT_ID/PLAID_SECRET`) rather than relying on account removal alone, since a copied secret isn't revoked by removing dashboard access.
- [] **Plaid dashboard:** remove as a team member.
- [] **Apple Developer Program / App Store Connect:** remove from the team.
- [] **Google Cloud Console / Play Console:** remove IAM/team access.
- [] **Expo/EAS:** remove from the account/organization.
- [] **Password manager:** revoke vault access; rotate any credential they could have viewed even if not actively used (shared logins should be avoided per [Access Control Policy](#), but any that exist must be rotated).

- [] **Physical/device access:** confirm any company-provisioned device or local copy of `.env`/secrets is returned or wiped.
- [] **Sign-off:** the founder (or, once one exists, a designated security lead) confirms every item above is complete and records the date, mirroring the review discipline in the [Access Control Policy](#).

Timing

All access listed above is revoked on the person's last working day, not on a delayed schedule — for involuntary or for-cause departures, access is revoked before the person is informed, to prevent retaliatory action.

What doesn't apply yet

Background checks, exit interviews covering IP/confidentiality obligations, and a dedicated HR offboarding process are not defined here, since they depend on decisions (contractor vs. employee, jurisdiction) that don't exist yet for a one-person team. These will be added when Penny Pilot's first hire is being onboarded, not left until after someone has already left.
